

1st Floor Lobby (7'-10" wide x 27'-10" tall)

3rd Floor Lobby (7'-10" wide x 12'-8" tall)

The tapestries suspended in the first- and third-floor lobbies illustrate the course of the Deschutes River as it flows from Benham Falls, through Bend, and down toward the new Public Works Campus.

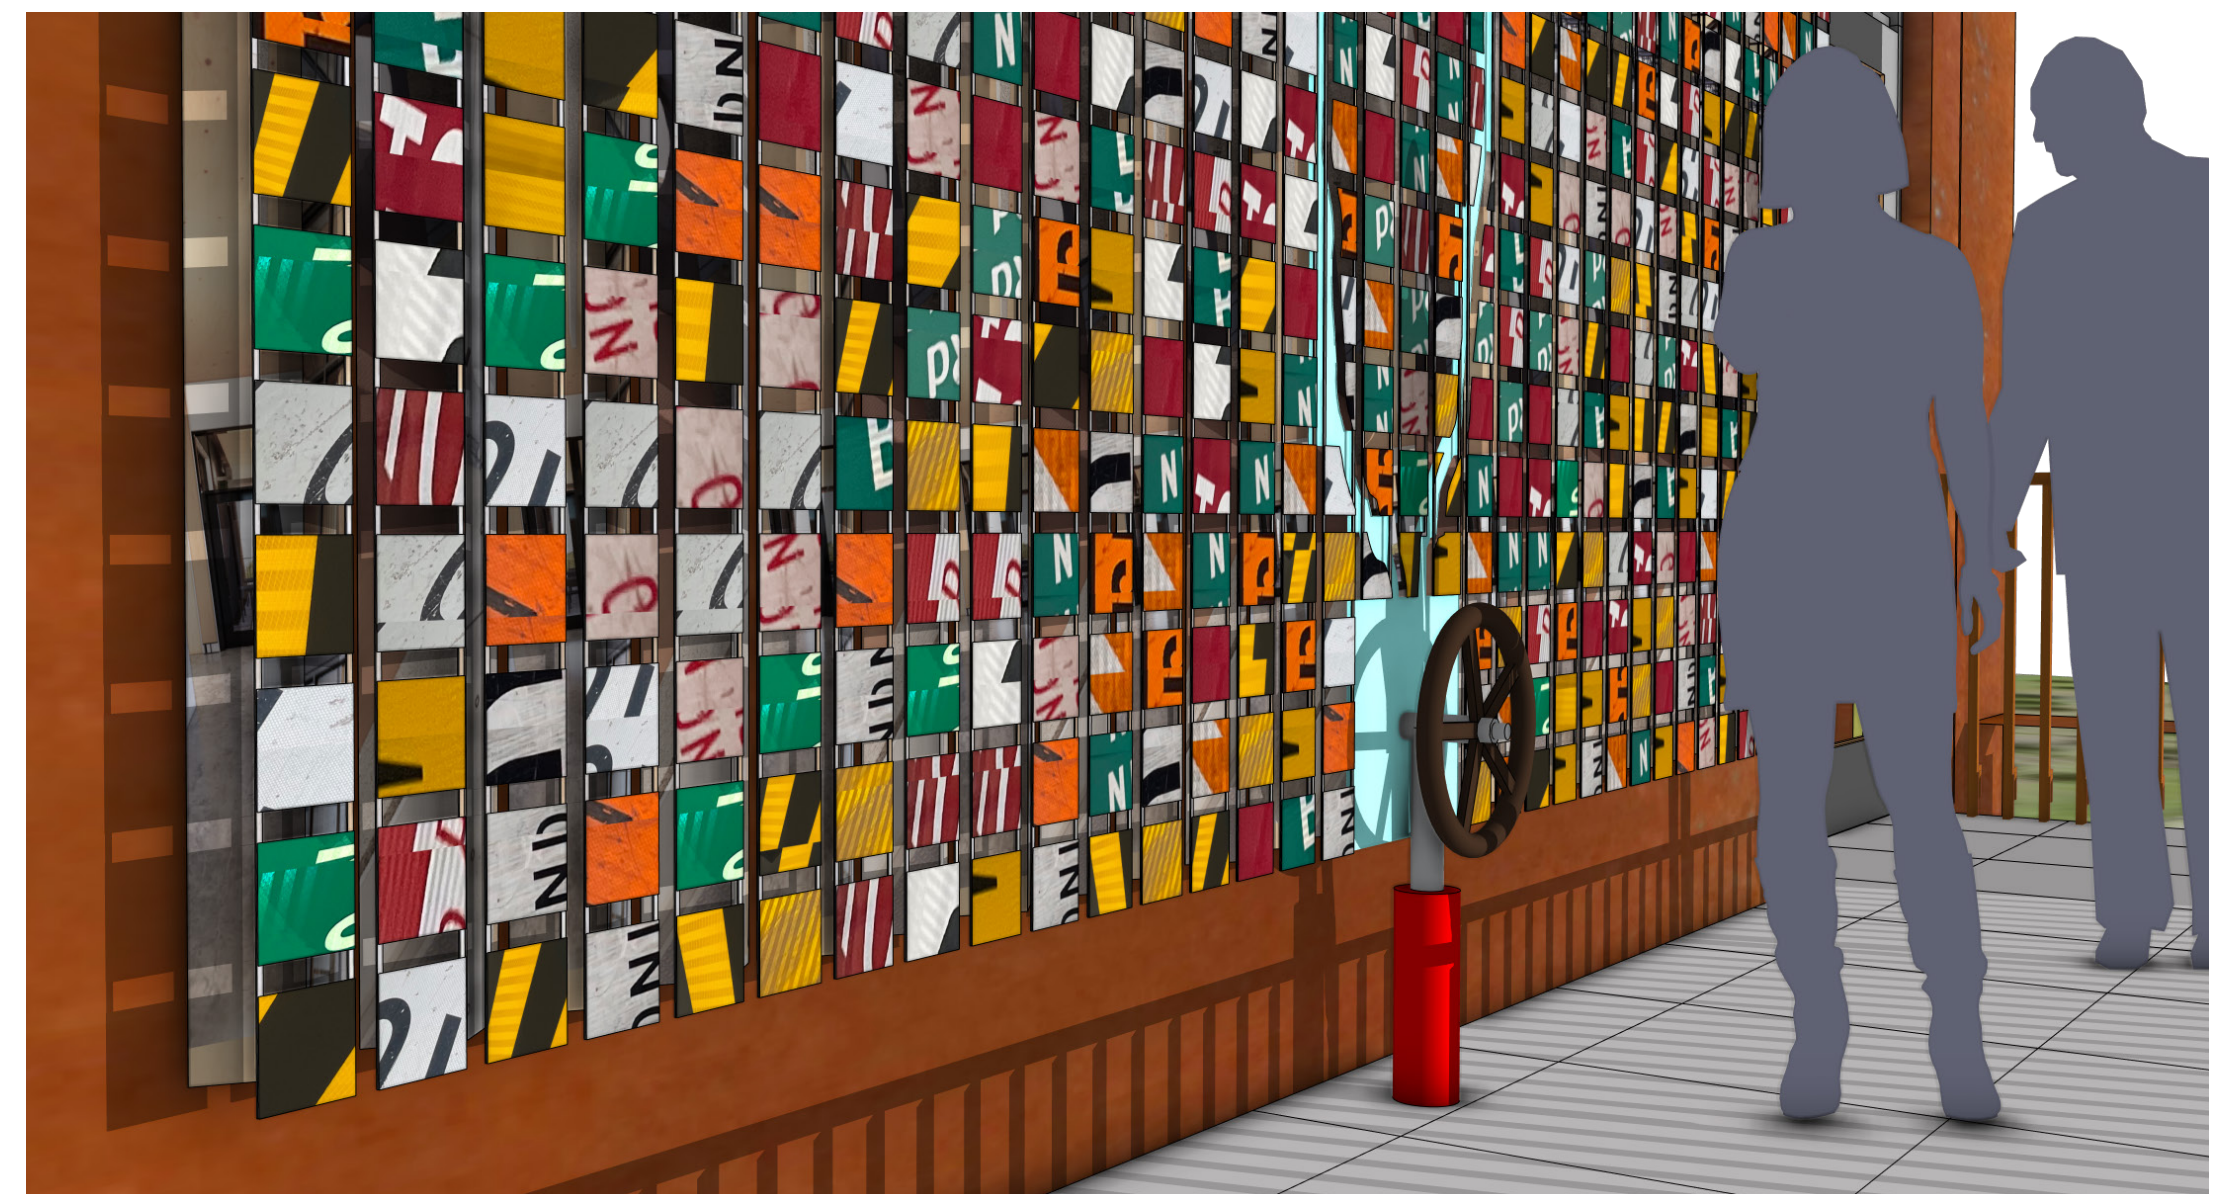

Looking up at the tapestry in the 1st Floor Lobby.

All three tapestries are fabricated from castoff aluminum traffic signs. Their colors and graphics create a rich mosaic and their prismatic film surfaces provide a surprising glow for nighttime illumination. Suspended behind these strands of sign fragments is a curtain of mirror-finish stainless steel plates. These mirrors will add a mysterious depth to the artwork. The slight movement of air in the lobby will create a gentle shimmering, the illusion of water flowing under the surface.

Terrace (14'-6" wide x 12'-0" tall)

For the terrace, the tapestry illustrates the watershed that provides most of Bend's drinking water. The water is collected at the Bridge Creek Intake and diverted into a 24" pipeline.
